Plumbing

The plumbing includes the hot and cold water supply, the sewage disposal, the production of domestic hot water as well as the ventilation and sanitary facilities.

It comes upstream to a whole distribution network. This network is complex and requires a lot of stakeholders and work to benefit from clean and healthy water.

Global Cold specializes in fluids techniques to master :

- The sanitary regulations (hygiene, healthiness);
- The water hardness that is its rate of limestone
- The PH of the water that is its acidity or its basicity
- The level of safety in the choice and the sizing of networks and equipments

Plumbing

The principles of fire protection regarding construction, equipment and use are applied by determining all the action items to ensure fire safety, under the standard in force.
